Course Description

Introduces the physiology of aging; integrates caretaker guidelines; demonstrates skills to care for aging at a variety of functional levels. Prerequisite: Admission to the Program. Lecture 3 hours per week.

General Course Purpose

The purpose of this course is to introduce students to the older adult including physiology of aging and practical skills for taking care of the older adult. The course will introduce students to the physical and psychological needs of the older adult and to practical skills to take care of the older adult at various functional levels. This course will supplement health curriculums and provide students with practical skills for employment and/or personal use as a caregiver for an older adult.

Course Prerequisites/Corequisites

Admission to the program

Course Objectives

Upon completing the course, the student will be able to:

- Discuss the links in the infection process
- Explain how the body’s protective mechanisms work to prevent infection
- Discuss factors that make the elderly more susceptible to infection
