Western Alberta and eastern British Columbia showcase tectonic, sedimentary, geomorphic, and glacial features which provide world-class examples of geologic processes. Students in this course will complete field studies of locations in Drumheller, Banff, the Burgess Shale, and the Athabasca Glacier, as well as other sites. The course will involve VERY STRENUOUS outdoor physical activity: Students are expected to hike several miles at high elevations in rough mountainous terrain in order to accomplish course objectives. Airfare, lodging, and transportation are covered in the $1600 (US) course fee (does NOT include tuition or food).

For more information, contact assistant professor of geology Callan Bentley (office: CS 248-A) at cbentley@nvcc.edu or 703.323.3276

A valid passport is required!
